Bilateral Meetings

- Tuesday 16:00 - 18:30

Description

We are an engineering company seated in the Republic of Serbia providing integrated services of project design and work supervision/direction. Along with provision of standard engineering services we are specialized in industrial projects in all operation phases, while fully respecting local legislative. We are guided by principles of international engineering - FIDIC and EU standards. By using modern hardware and software solutions within Virtual Reality programe Idest allowed the Client easy and simple access to the future facility. Before the very works it is possible to present the facility in 3D option in real time/space. We emphasise possibiltiy to correct details of the structure „on the spot“. The advantage are savings in timely corrections. The special advantage is possibility of virtual sales of the facility. „The best way to predict the future is to take a walk through it!“

In order to support future industrial investments Idest offers services of field engineering Assessments including: land/property status (cathegory and ownership), development of procedure map, general BoQ (pending on planned technology and purpose) etc.
