Bilateral Meetings

- Tuesday 16:00 - 18:30
- Wednesday 09:00 - 10:45

Description

Dillon d.o.o. is dealer of Denso, Hyundai and Veltru industrial robots as well as MiR mobile robot platforms and mechatronic components for Balkan region. The company is located in Belgrade, and besides selling the robots, we offer training, support in finding the optimal solution, technical support and maintenance for all our products. Denso is a producer of small and medium sized industrial robots (up to 20 kg payload and 1.3 m of range), and it is considered as a world leader in the field. Denso robots are offered in 4-axis SCARA, 5 and 6 axis configuration, and they have exceptionally good performance with affordable prices and excellent user-friendly software. Robots from Denso are widely used in fields of assembly, machine tending, painting, application of sealant/adhesive, sorting, inspection, packaging, testing and many other fields limited only by the user's imagination. With numerous options and customizations, the users can choose from more than 400 different configurations of robots in order to find the optimal robot according to their needs. Eyefeeder is a company which produces intelligent and flexible feeders. Intended for integration with Denso robots, the feeding systems typically include a camera and flexible feeder which enables movement of parts with conveyor and/or vibration. Compact and easy to use and with control system completely integrated in Denso robot controller, Eyefeeder is a perfect solution for part handling and classification without re-circulation. Hyundai robots are well known brand from South Korea, with payloads from 6 kg to 500 kg, ranges from 1.5 m to 3.5 m and 4, 5 and 6 axis configurations. Robots from Hyundai are very robust and reliable and easy to operate. They are suitable for welding, palletizing, machine tending, painting, glue/adhesive/sealant application, material handling and many other uses. Veltru is Swiss producer of delta robots for fast manipulation of lightweight objects. Robots from this producer are typically used in combination with conveyors, for classification and other pick&place operations. MiR is a producer of mobile robots for automated warehouses, but they can be used as mobile platforms for industrial robots, conveyors and other mechatronic components. MiR robots are easy to use and program and offer unrivalled flexibility.
